

New Product Sales Analysis_ Sales Strategy Review

Pens and Printers — Office Stationery Launch

Khin Htet Kyaw

Khin Htet Kyaw

Business Context & Goals

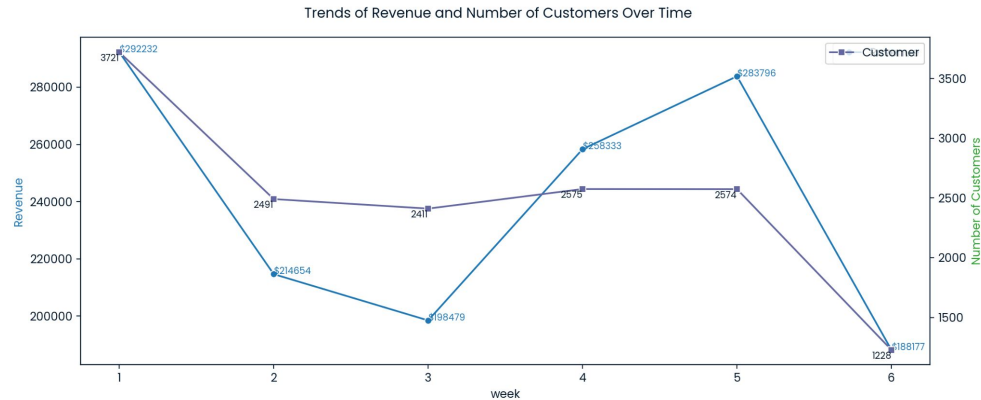

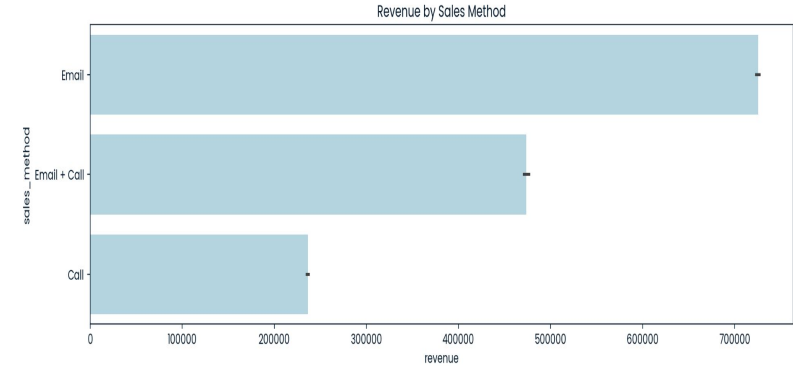

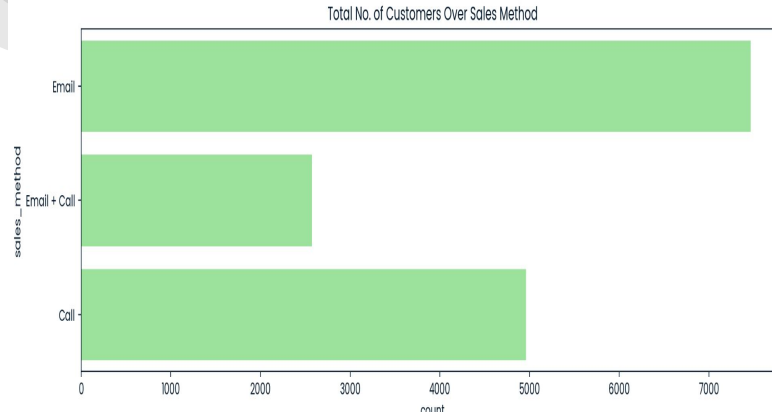

- ❑ Company launched new office stationery product line 6 weeks ago
- ❑ Need to optimize sales strategies for revenue and efficiency
- ❑ Key questions:
 - ❑ Customers reached per sales method
 - ❑ Revenue distribution overall and by method
 - ❑ Revenue trends over time
 - ❑ Recommended sales approach balancing results & effort

Data Validation and Cleaning Summary

- ❑ Verified **data types** for all columns are correct .
- ❑ DataFrame has 15,000 rows.
- ❑ **Revenue** column has some missing values — addressed during cleaning
- ❑ **years_as_customer** contains invalid values exceeding company age — cleaned/removed
- ❑ All numerical columns checked: **no negative values** found
- ❑ **customer_id** is unique — no duplicates
- ❑ **sales_method** shows 5 unique values (expected 3) — corrected typos and standardized
- ❑ **state** contains 50 unique valid U.S. states
- ❑ Cleaned and standardized **sales_method** for consistency

Customer & Sales Overview

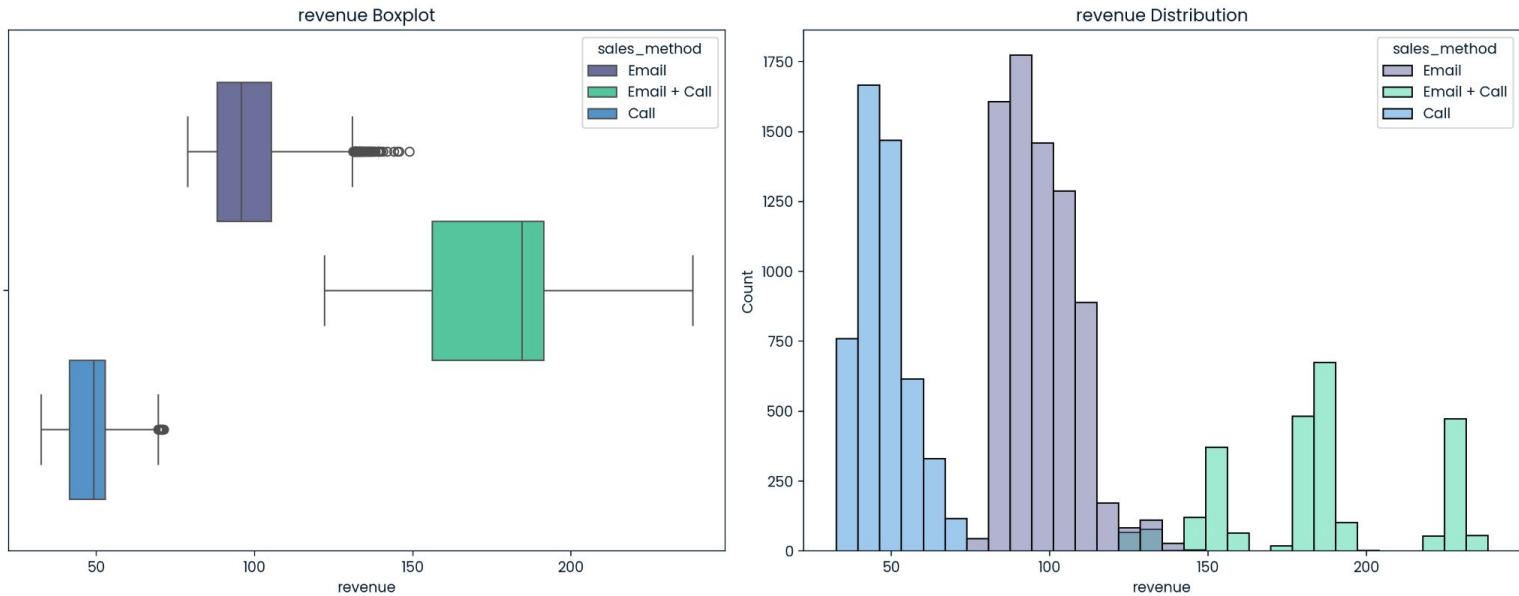

Customer & Sales Overview

sales_method	total_revenue	num_customers	revenue_per_customer	total_units_sold	avg_site_visits
Call	236395.16	4962	47.64	47187	24.42
Email	725440.63	7466	97.17	72639	24.75
Email + Call	473837.58	2572	184.23	31444	26.77

- The Email method generated the highest revenue (\$236,000) and attracted the largest number of customers (7,466).**
- Although fewer customers purchased through the Email + Call method compared to Email alone, this group still generated higher revenue than the Call-only method.
- This suggests that customers reached via both Email and Call tended to purchase higher-value items.

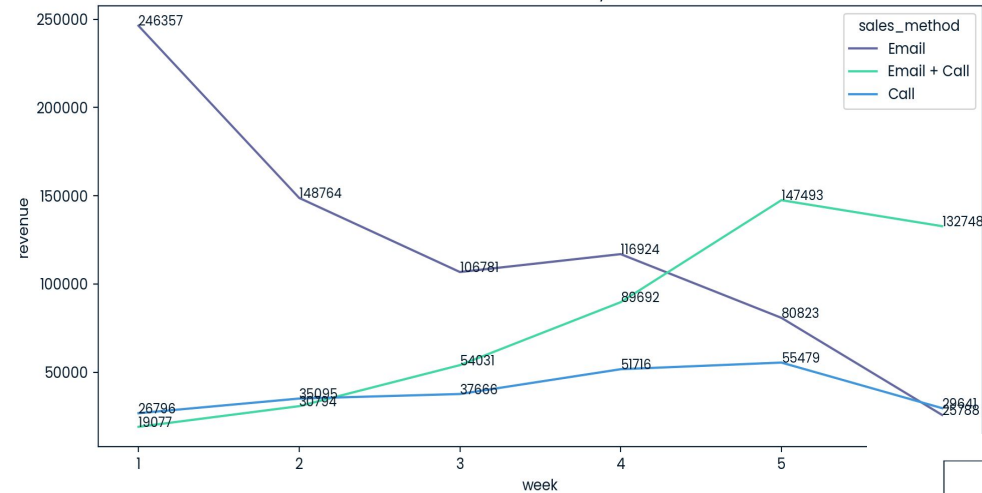

Revenue Distribution

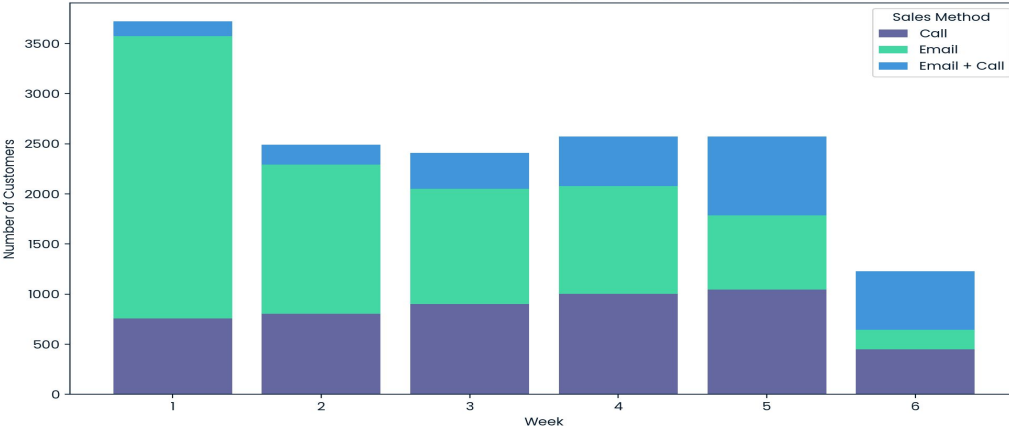

There are some outliers in the data, likely caused by occasional bulk purchases that significantly increase revenue.

Revenue and No. Purchasers Over Time

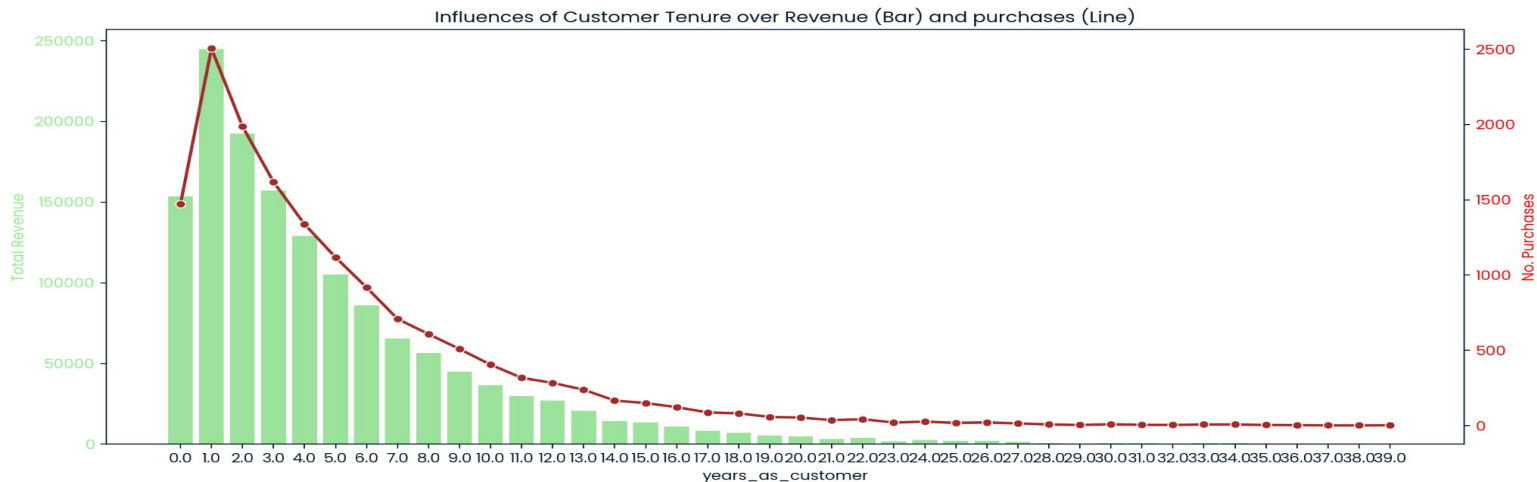

Revenue Trend Over Weeks by Sales Method

Number of Customers per Week (Stacked by Sales Method)

Additional Customer Insights

Purchases and Revenue by Tenure

- Purchases and revenue tend to decrease as customer tenure increases.
- This may suggest that newer or younger customers are more responsive to the new product line.

Key Findings

- **Customers:** Email reached the highest number of customers due to low effort (two mass emails). Call required ~30 minutes per customer, limiting reach. Email + Call combined email with a ~10-minute follow-up call, reducing total customers contacted but increasing engagement.
- **Revenue:** Email generated the highest total revenue due to volume. Email + Call had the highest revenue per customer (\$184.23), indicating higher order value thanks to personal follow-up. Call alone had the lowest revenue per customer (\$47.64) and total revenue.
- **Revenue by Sales Method Over Time:** Email revenue started high and declined overall. Email + Call steadily increased revenue, showing trust-building effect. Call revenue rose slightly but remained lowest.

Proposed Business Metric

Metric: Revenue per Hour of Sales Effort (RPH) — total revenue generated divided by total sales team hours spent.

Why: This metric balances revenue outcomes with team effort, showing the true efficiency of each sales method.

How to Monitor Revenue per Hour of Sales Effort (RPH)

To monitor this metric, the business should:

- Track total revenue by sales method on a weekly basis.
- Estimate the total hours spent per sales method based on time per customer.
- Calculate $RPH = \text{Total Revenue} \div \text{Total Hours spent}$.
- Compare the RPH for each sales method weekly to allocate resources effectively.

Assuming conversion rates per method:

- **Email** = 20%
- **Call** = 40%
- **Email+Call** = 25% of contact customers.

Sales Method Performance Comparison

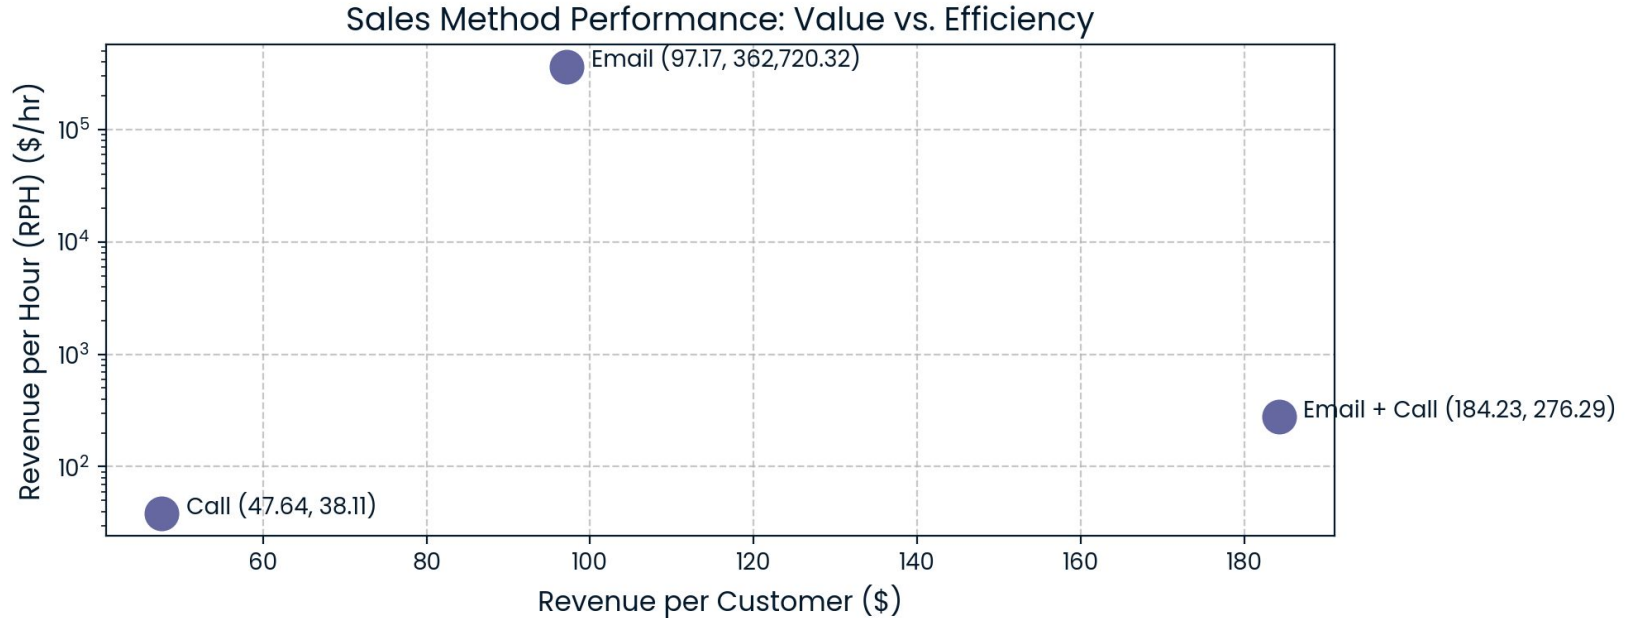

Required Time:

- **Assumption:** 2 hours for overall email marketing
- 30 min for Call
- 10 min for Email + Call

Initial Estimate:

- Email: Very high RPH due to minimal time, broad reach.
- Email + Call: Good RPH; higher revenue per customer balances moderate time.
- Call only: Lowest RPH; long call times and lower revenue.
- Revenue per hour values:
 - Call: \$38.11
 - Email: \$362,720.32
 - Email + Call: \$276.29
- Revenue per customer values:
 - Call: \$47.64
 - Email: \$97.17
 - Email + Call: \$184.23

Sales Method Performance Comparison

Final Summary and Recommendations

- **Use Email campaigns** for fast, wide reach with minimal effort.
Keep regular follow-ups to reduce drop-offs.
- **Leverage Email + Call** for high-value customers.
This approach has strong growth potential.
- **Cancel Call-only outreach** because it's time-consuming with low returns.
- **Focus on newer customers** who respond well to new product lines.
- **Track Revenue per Hour of Sales Effort weekly** to keep your team efficient.
- **Run simple sales promotions** to balance revenue:
 - Offer Cross-sell Promotions in email-marketing to increase average order revenue(AOV).
 - Offer a Threshold Gift Promotion for who buy more than designated amount to increase AOV.
 - Offer Promotion for Product Subscriptions to make Customer Lifetime Value (CLV) stable and higher.
- **Monitor results:**
 - Check conversion rates during promos.
 - Make sure discounts don't hurt your profit margin.

Thank you...
